

# Coffee Shop Sales Dashboard

## Data Analysis Project | Microsoft Excel

A data-driven dashboard built using Excel to analyze coffee shop performance

### Project Overview

This project analyzes coffee shop sales data to identify trends in revenue, customer behavior, product performance, and payment preferences using Microsoft Excel.

### Objective

To analyze coffee shop sales data and uncover key insights related to revenue trends, top-performing products, customer payment behavior, and peak sales periods.

### Dataset Description

The dataset contains coffee shop transaction records from March 2024 to March 2025. Each row represents a single transaction and includes attributes such as date, hour of purchase, coffee type, payment method, and transaction amount.

It also includes time-based features such as time of day, weekdays, and months, enabling analysis of sales patterns, customer behavior, and product performance.

### Tools Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- Dashboard Design

### Dataset Source

- Kaggle – Coffee Shop Sales Dataset
- Contains transactional data including date, time, product, payment method, and revenue

## Process

- Organized and reviewed transactional sales data
- Built Pivot Tables to analyze revenue, transactions, and trends
- Created KPI metrics (Total Revenue, Total Transactions, Average Transaction Value)
- Designed interactive charts for coffee performance, payment behavior, monthly trends, hourly trends, and time-of-day analysis
- Added slicers to enable dynamic filtering (Month, Product, Payment Method, Hour)
- Developed a clean and structured dashboard layout for clear data storytelling

## Key Metrics

- Total Revenue
- Total Transactions
- Average Transaction Value

## Key Insights

- Latte is the top-performing coffee in both revenue and number of orders
- Within the March 2024–March 2025 period, revenue peaked in October 2024 and February 2025
- Card payments dominate transactions, indicating a strong customer preference for digital payments
- Revenue is relatively balanced across time periods, with nighttime and afternoon slightly outperforming morning
- While 10 AM is the peak single hour, revenue is distributed across multiple evening hours

## Business Value

These insights can support data-driven decision-making by optimizing product offerings, improving staffing during peak hours, and enhancing digital payment strategies.
